## PERSONAL STATEMENT

Working with web development since 2021, I have participated and developed websites which helped hospitals, work safety agencies, banks and more. Always concerned with the User Experience and using good practices and clean code to deliver the best to clients.

## WORK EXPERIENCE

### Compass UOL, Remote — *Software Dev Junior*

October 2022 - Present

We are migrating an old JAVA Front-end project to a new one with ReactJS. I've been working together with the team and stakeholders, developing new features to satisfy user needs with modern solutions. I cooperated with the company's design system to maintain a standard in all projects. Application tests using Jest, React Testing Library, and Cypress.

### Compass UOL, Remote — *Software Dev Trainee*

November 2021 - September 2022

I worked on a closed scope project to solve a lawsuit requested by a client. Help the product owner specify the best user experience for the site.

### Compass UOL, Remote — *Software Dev Intern*

august 2021 - november 2021

We started learning the basics of web development, tested our skills in small projects and we made a drug calculator website to help nurses and doctors at the regional hospital. The project is responsible for showing users which measure to use for each medicine depending on what was requested by the doctor. This has helped a lot with baby dosing that got too dangerous without this project.

## COMPETENCES

Teamwork

Agility

Organization

Ethics

## LANGUAGES

Portuguese – Native

English – Advanced

## University of Santa Cruz do Sul (UNISC), Santa Cruz do Sul (RS, Brazil)— *Graduation*

2019 - 2025

Bachelor of Computer Science

## OTHER PROJECTS

### Construction Management — *Freelancer (Fullstack)*

I made a website/app that can be used to manage the client's company constructions and inspections. The users can create, read, update, delete constructions, link inspections, inspections checklists, link photos, action plans to solve some problem in inspection and create PDFs with these informations or send it by email.

Technologies used:

- Front: HTML, CSS, JS
- Back: PHP
- DB: MySQL

### Inspections Management — *Freelancer (Fullstack)*

The client owns a construction inspection company for other companies. I'm developing  a system that can manage their users and responsibilities, schedule visits, register companies, create documents, send notifications to users and more.

Technologies used:

- Front: React, TS, Styled Components
- Back: PHP, Lumen
- DB: MySQL
